

SATLINK™

MOBILE SATELLITE UPLINK PLATFORM™

FTI introduces its Mobile Satellite Uplink Trailer: SatLink™

The C or Ku band SatLink™ offers a wide variety of optional features including Two-way SCPC or TDMA Communications, High Speed Data Link, Moving Map with USGS Topographic Base linked with GPS and Satmaster Pro Software, pole mounted observation camera system and power systems of battery (up to 72 hours), propane generator, and commercial power cabling.

The addition of the generator option provides constant utilization of the SatLink™ in areas that may not have access to commercial power making the SatLink™ extremely versatile in disaster areas and rural locations.

The flexibility of SatLink™ allows the applications can change as quickly as the technology.

The design goal of the SatLink™ was to provide a stable universal platform with stable versatile power sub-systems capable of supporting any customer equipment and satellite option. As designed, customers may purchase the basic SatLink™ and add their own specialized electronics in the standard rack space provided.

Suggested applications for SatLink™

- Emergency Disaster Relief
- Rural Economic Development
- Private State LAN/WAN Communications
- Rural Internet Communications
- State Highway Department
- Department of Education
- State Parks and Recreation
- Interstate & Intrastate Secured Communications
