

Marina Solutions

What you need to know about offering Wireless Internet in your marina

What is a WiFi hotspot?

A Wifi Hot Spot refers to a physical place covered by a wireless internet connection. Hot Spots are typically smaller locations such as coffee shops, public library's, or in your case, a Marina.

Many caravan parks, marinas and camp sites throughout the US have installed wireless broadband Internet access (known as WiFi) as a value added service for their customers. Public access hotspots are a popular way for people to get on-line when they are away from their home, office or on holiday wishing to utilize the Internet to look up local information or simply surf the Net which is fast becoming a popular pastime for people of all ages during those rainy days.

Offering high speed internet in your marina would compliment other value-added services while generating additional revenue for your property.

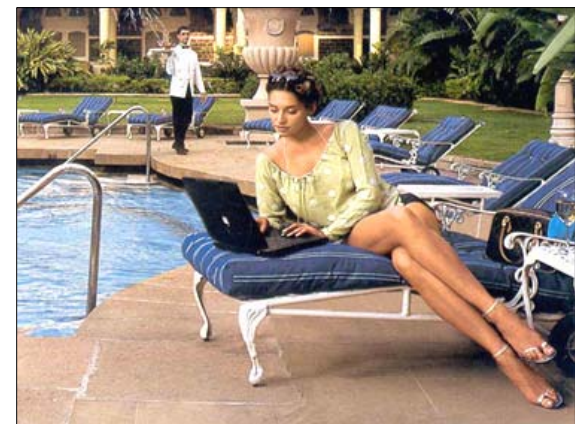

Why should you add High Speed Internet?

Adding high speed internet in your marina gives you the opportunity to:

- ✓ **Generate an additional source of revenue for your property**
- ✓ **Drive WiFi users to your Marina**
- ✓ **Offer a value-added amenity that today's yacht owners, crews, and guests are looking for.**
- ✓ **Gain a competitive advantage over competitors.**
- ✓ **Attract and retain new customers!**

Help your boating customers bring the convenience of the Internet lifestyle from their home to their boat.

Why should you add High Speed Internet?

Both business and leisure travelers have become very sophisticated and expect to have wireless Internet access when they are on the road.

Internet access is quickly becoming a necessity rather than a luxury.

You will be venturing into a virtually untapped market, thereby offering a valuable service to your marina before most of the competition

Standout, differentiate yourself from the others. Bring new boaters to the docks. Provide the latest in marina service

Join the WiFi revolution, don't be left behind!
